Education

McGill University Montreal, QC
Bachelor of Arts in Computer Science *Expected 2028*

Projects

McGill Autonomous Delivery Platform | *C++* Sep. 2026 – Present
- Developing a C++ campus-delivery optimization platform for potential autonomous food delivery at McGill, incorporating graph-based route planning using Dijkstra's/A*, delivery scheduling, and simulated robot dispatch.
- Long-term goal: explore potential partnerships with autonomous delivery providers such as Starship Technologies, Avride, and Robot.com, alongside McGill Food and Dining Services, to support future campus deployment.

Pet Decider | *JavaScript, HTML, CSS* | Demo Apr. 2026 – Oct. 2026
- Built and deployed a web application that filters and ranks eight pet-care options using nine user inputs, with match explanations and side-by-side comparisons
- Separated matching logic, interface, and local storage into modules; implemented input validation, duplicate prevention, and recovery from unavailable storage
- Implemented field-level error states, focusable validation summaries, and ARIA live announcements for updated match results
- Added automated matching and storage tests, including a 1,512-profile regression sweep; configured Node.js tests and Playwright browser checks in GitHub Actions

DEWAEcoApp | *React, TypeScript, JavaScript, Tailwind CSS* | Demo Dec. 2024 – June 2025
- Built a React and TypeScript prototype comparing monthly, annual, and five-year water-use costs across products for DIDI's UAE Ministry of Energy and Infrastructure sustainability challenge.
- Implemented typed product records and React state updates for adding, editing, and removing products; calculated costs from usage, flow-rate, and water-rate inputs
- Expanded the concept into a deployed web demo with photo-assisted bill review, monthly utility comparisons, and simulated DEWA-inspired conservation rewards.

DressAway | *JavaScript, Code.org Game Lab* | Demo Dec. 2024
- Built a JavaScript game with keyboard movement, mouse-based clothing collection, collision detection, scoring, health, and randomized target spawning
- Added a second stage at 50 points, doubling horizontal movement speed and changing the background, obstacles, and collectible clothing

Experience

Research Intern Mar. 2025 – June 2025
World Systems Solutions (WSS) *Dubai, UAE*
- Researched conflict drivers and applications of artificial intelligence in crisis prediction and humanitarian response for the PHOENIX initiative
- Designed mathematical prototypes combining socioeconomic, environmental, political, and cultural indicators to assess conflict risk, mediation potential, and long-term stability
- Applied the proposed framework to country-level case studies and synthesized findings into a final research proposal and team presentation

Graphic Design Intern Sept. 2022 – Sept. 2025
Toucan *Dubai, UAE*
- Designed digital and print assets, translated project requirements into layouts, and refined designs through iterative feedback, with attention to visual hierarchy and clear communication

Technical Skills

Languages: Python, JavaScript, C++, TypeScript, HTML, CSS
Frameworks & Libraries: React, Tailwind CSS, Lucide React
Developer Tools: Git, GitHub Actions, GitHub Pages, Code.org Game Lab
Testing: Node.js test runner, Playwright
Concepts: Data Structures, Algorithms
